# Xpire: ASDA Stocking Support System

Luke Towell

School of Computer Science
University of Liverpool

3rd July 2020

# What is being built refresher...

The solution that I am planning on implementing will include:

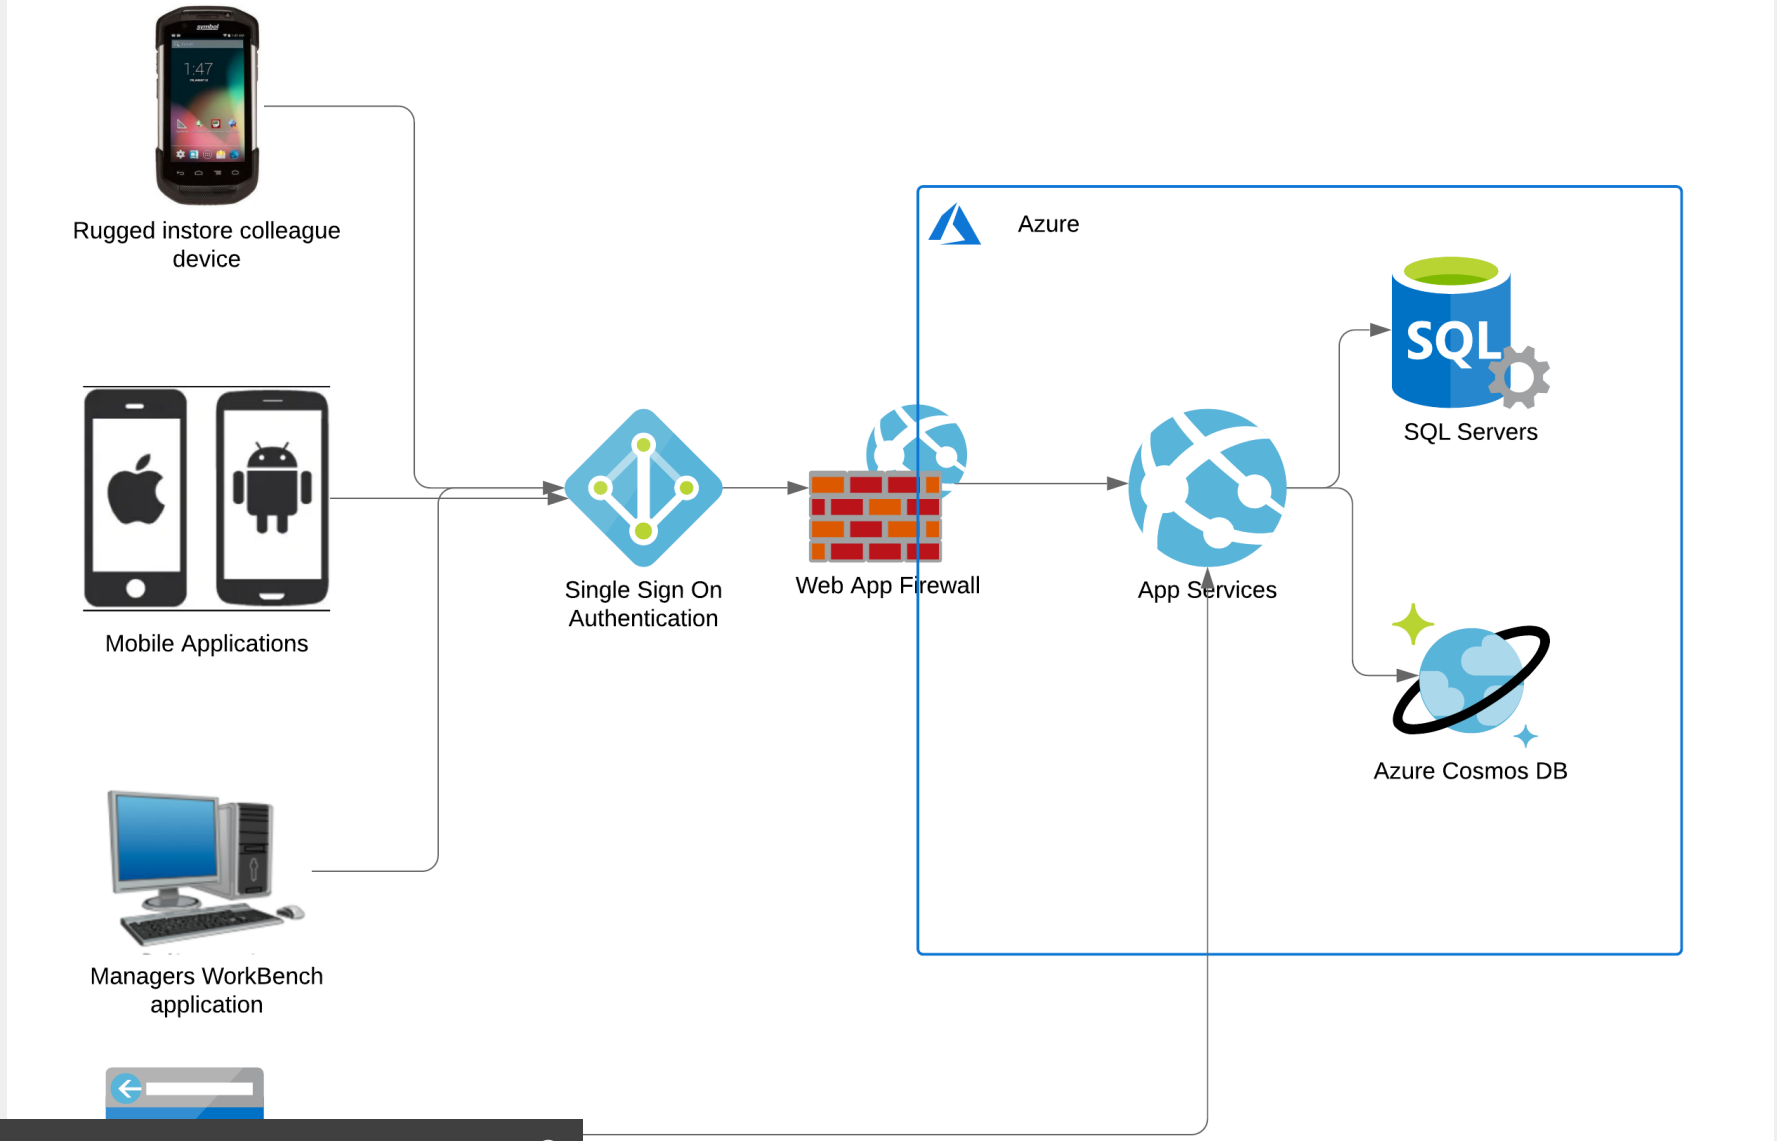
- An system which is capable of accessing ASDA stock data and informing colleagues what items are going out of stock.
- The solution will allow colleagues access from multiple device types including mobile and desktop computers
- Provide colleagues in the Fresh, Dairy and chilled produce departments adequate notice that stock expiry is approaching so they can decide which actions to take.

# What is being built refresher...

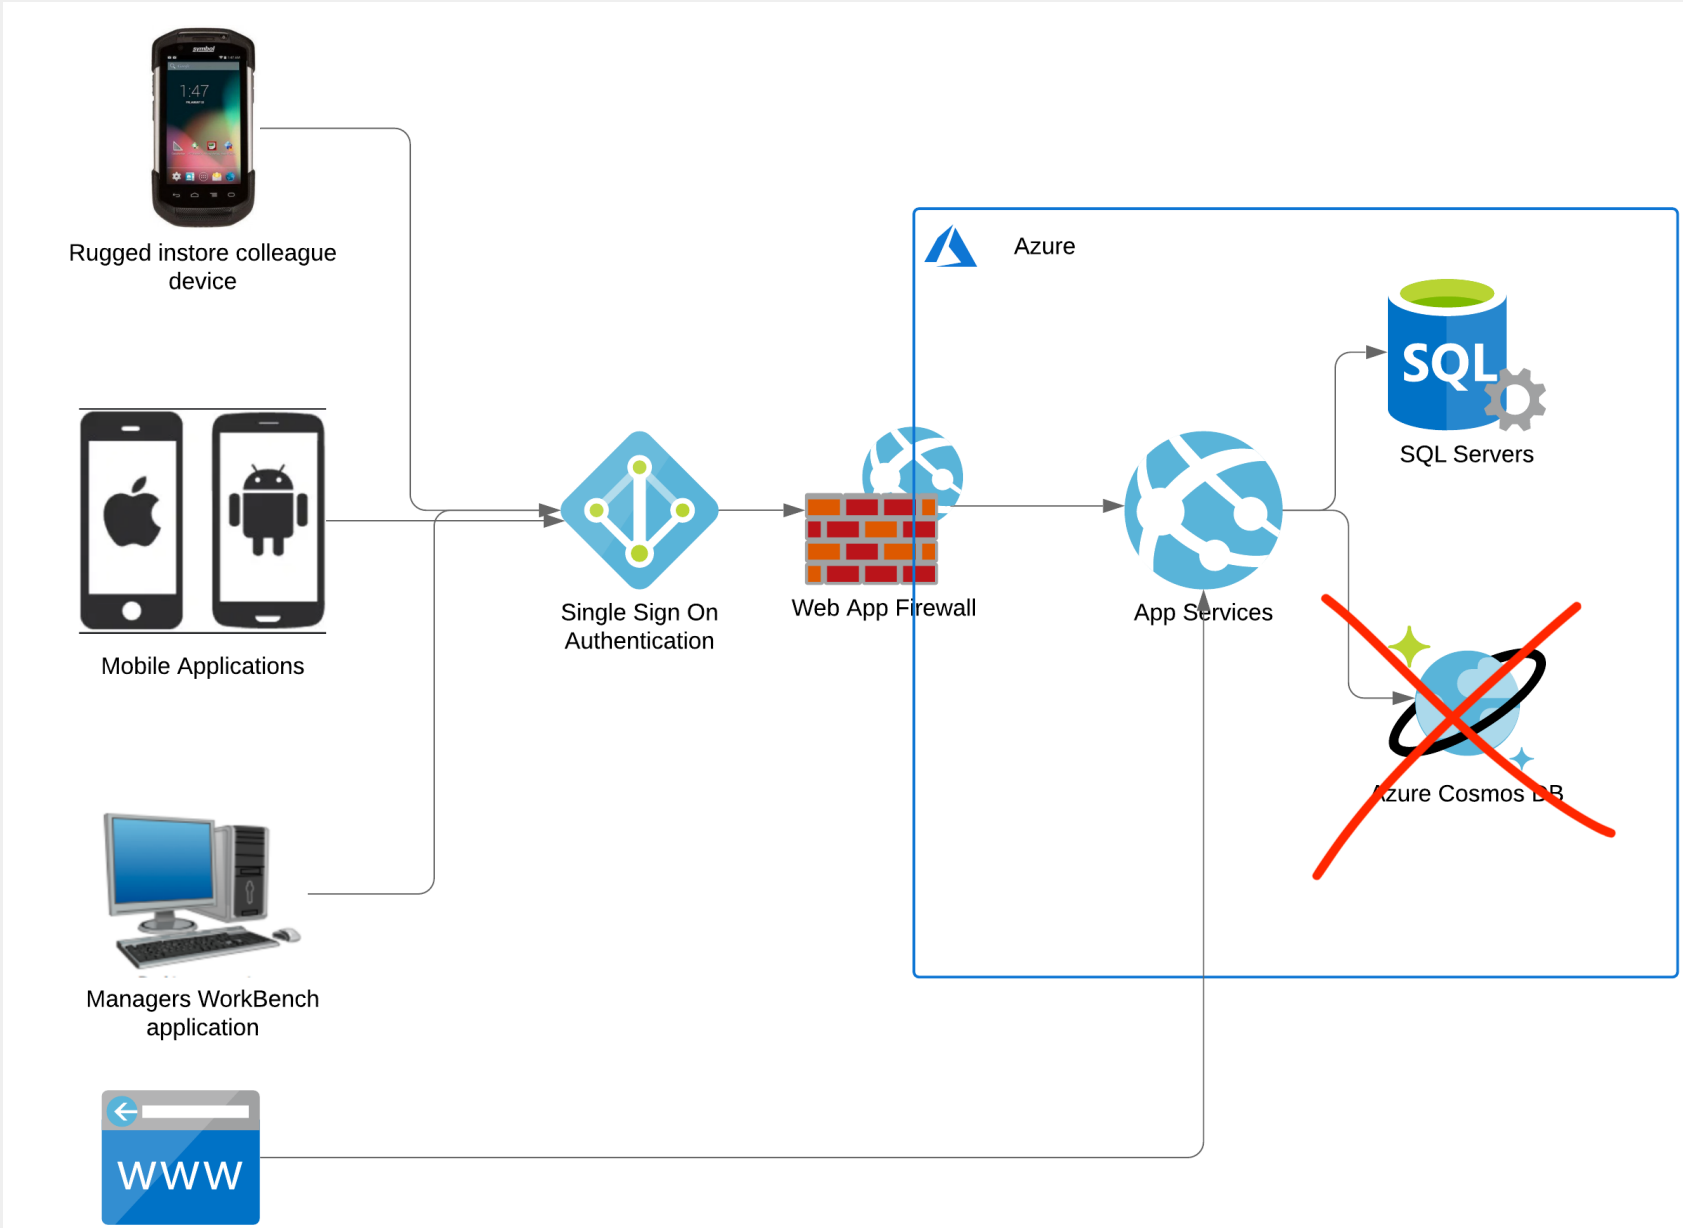
**So what did I say I would do to solve that issue?**

# What is being built refresher...

## So what did I say I would do to solve that issue?



# What did we actually end up with?



# Thats great Luke... now show us what you've actually done!

# Thats great Luke... now show us what you've actually done!

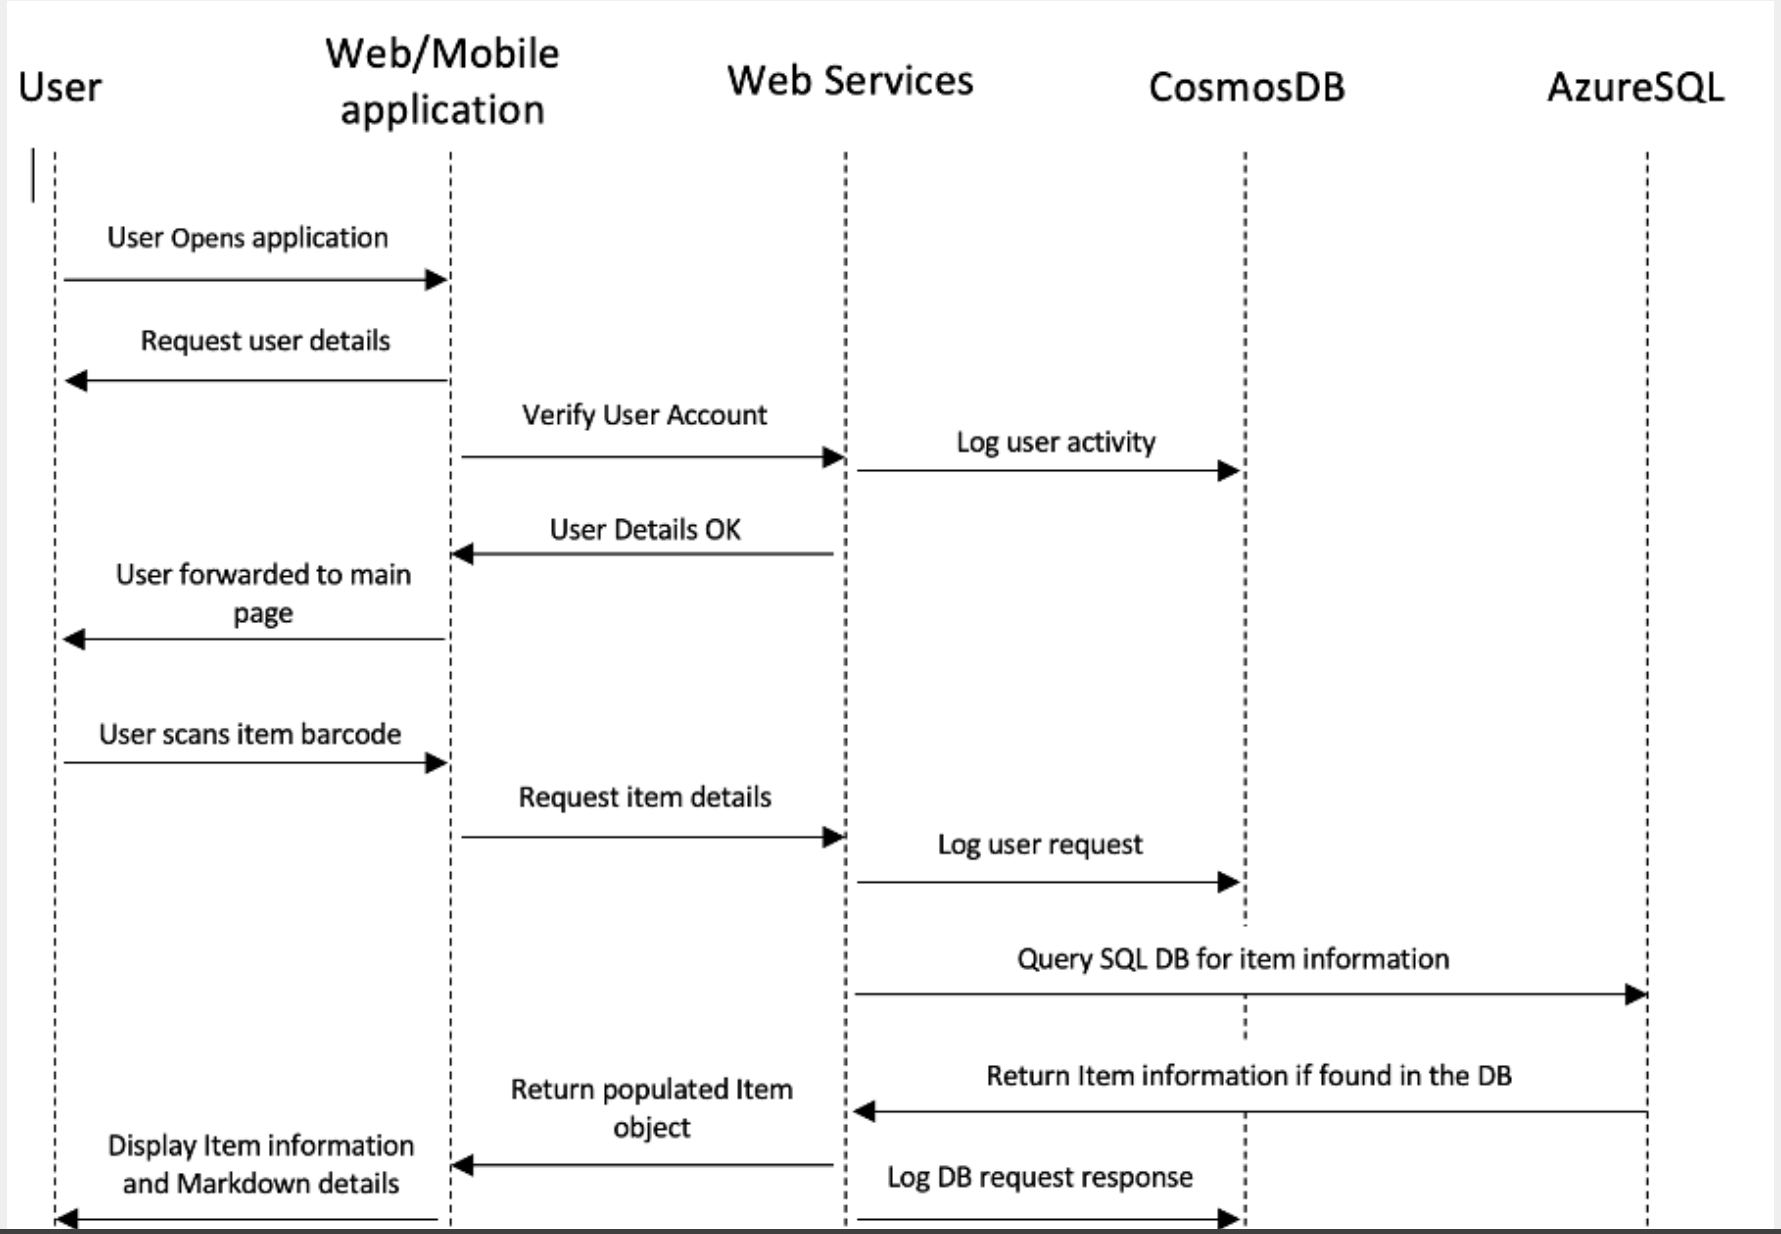
**On with the demonstration!**

# Demo Plan

In this demo I am going to briefly go over the following:

- UI design
- Database Design
- Applications
- Usage Scenario

# User Scenario



Thank you for your time!

**Questions?**
